(57)Abstract:

**PURPOSE:** To obtain a cruising board of an excellent maneuverability, by combining a wind with a V shape section at a support fixed on the board swinging freely only on both sides through a universal joint, and keeping the wing to be handled freely at a specific height from the board.

**CONSTITUTION:** A wing 4 with a nearly V shape section and opened upward is installed at a support 2 which is made swing only on both sides on a board 1 through a universal joint 6. When a rider on the board handles the wind 4, it can be moved maintaining at a specific height from the board through the support 2, and this handling and maintaining are easy. Furthermore, a maneuverability of much higher level than with a sail can be exercised by handling the wing 4.
